[1]The percent change is a function of the 69 sample companies.

[2]1984 forecasts for the residential and commercial sectors are based on available 1984 monthly data. The remaining months are derived by using a four year average. The industrial sector forecast is also based on available 1984 monthly data. The remaining months of 1984 are heavily weighted by last years sales with no adjustment made for degree days.

[3]Carriage volumes determined by using a simple straight expansion of sample data to represent the total gas utility industry. Carriage volumes for ultimate consumers are volumes delivered to another transporter, not the ultimate consumer, and are therefore broken out to eliminate double counting of volumes delivered to ultimate consumers.
